## A place of exploration and discovery

To capture an audience, especially a young one, an inspiring atmosphere must take hold of the visitors. With a BlueCore Laser Projector, massive images can be delivered with long-lasting superior image quality through maintenance-free operation.

Offering projection solutions for circular video walls and interactive globes, BenQ can also help museums show the secrets of the universe through immersive interactive experiences that visitors won't soon forget.

### How BenQ laser projectors make museum exhibitions immersive?

Museums benefit from BlueCore optional lens laser projectors' powerful installation flexibility and magnificent image quality, creating wondrous exhibitions that captivate the public.

BenQ's 4K UHD laser projection technology ensures that museum-goers will be able to clearly see every astronomical object, from the most brilliant planets to the faintest stars, in vivid detail.

360° Installation, Optional Lenses, Motorized Zoom, and Lens Shift features grant museums a variety of installation options that make it easy create fully immersive experiences.

BenQ's exclusive DMS Local software lets operators manage and monitor multiple devices from a central location and ensuring that all displays and projectors perform at their best. DMS Local also has several scheduling functions available to give the manager full control.

### How BenQ laser projectors can make the most out of even the smallest spaces?

Intimate art shows and galleries can create imaginative immersion in small spaces with the innovative short-throw BlueCore laser projectors.

XGA and WXGA resolution further installation flexibility with rare aspect ratios of 4:3 and 16:10.

Ultra Short Throw projectors with a throw ratio of a mere 0.23 turn that 'unusable' out-of-the-way corner into a showcase of aesthetic excellence.

Where space constraint is an issue, 360° projection is the answer with its ability to turn even the floor into an eye-catching experience.

Ultra Short Throw projectors with a throw ratio of a mere 0.23 turn that 'unusable' out-of-the-way corner into a showcase of aesthetic excellence.

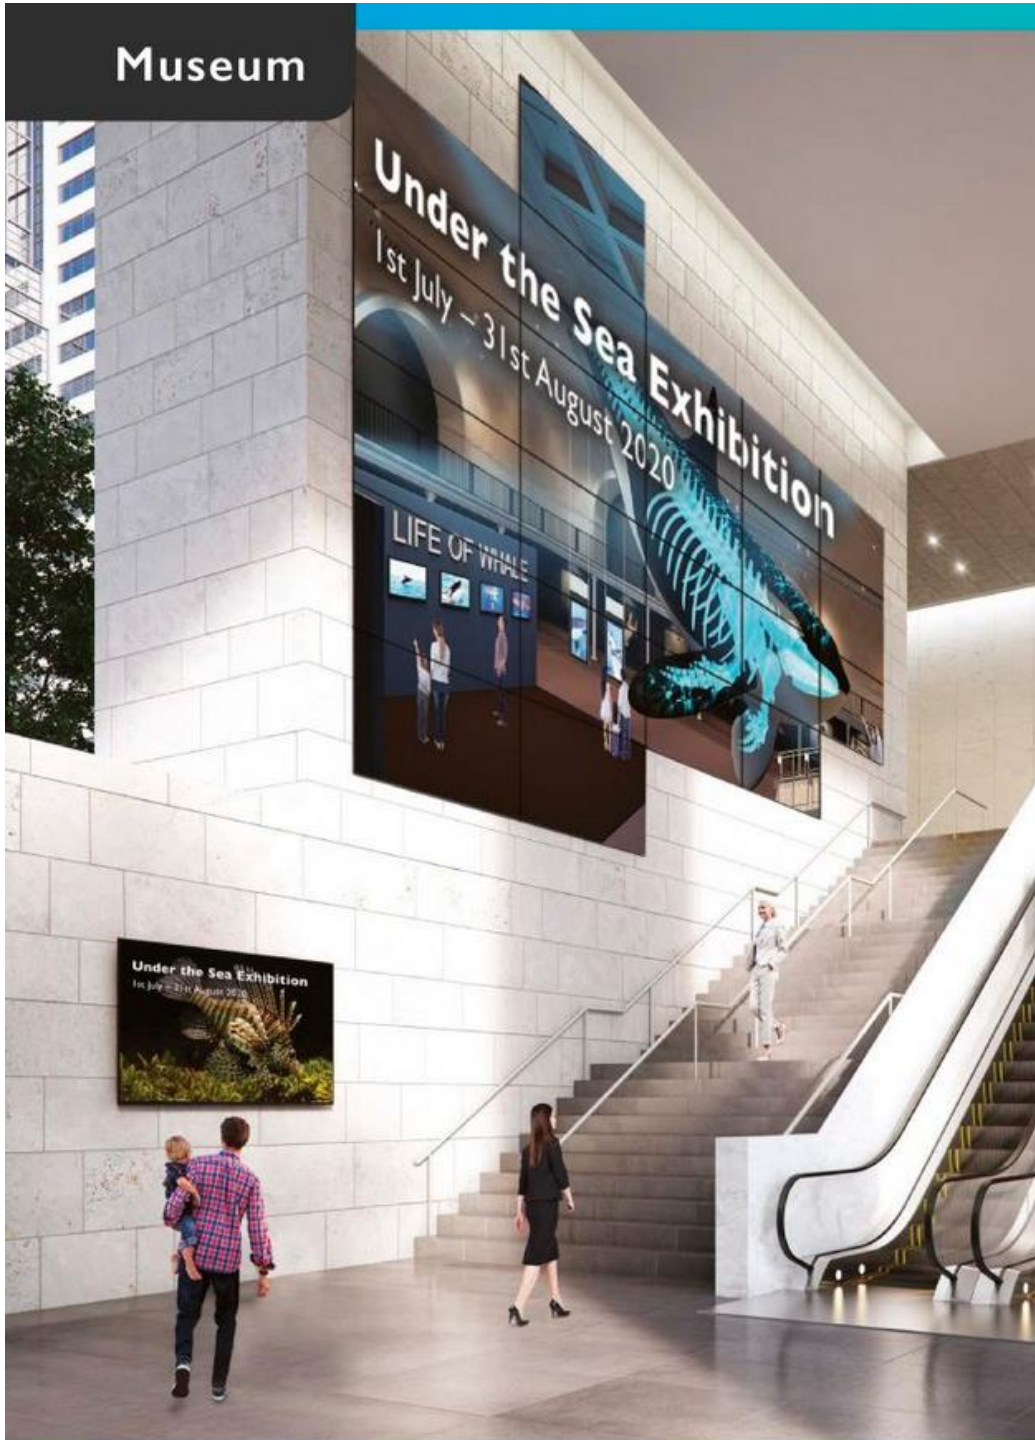

2D Keystone, corner-fit and Digital Shrink help overcome obstacles that previously made the usage of projection impossible, future-proofing even the toughest of spaces.

BenQ BlueCore laser projectors are IP5X certified, guaranteeing a hassle-free, long-life experience.

Ultra Short-Throw design for unobstructed viewing without space constraints
